1. View all chats in a List Format

Each chat element in the scrollable list consists of:

1. User ID
2. Last message sent
3. Timestamp of last message sent

2. Viewing chat history with a user

The chat history with a user can be viewed in a scrollable fashion, with timestamps of each message displayed below it.
Differentiate between read and unread messages

Unread messages are highlighted with the help of bold text and badges display the number of unread messages. Once the respective chat is opened, the visual cues are reset.

Create New Chat Channel

A user can start a new conversation with a fellow Nuleep user by clicking on the “Create new channel” button located in the bottom left of the screen. The user should then enter the ID of the user they would like to initiate the conversation with. On pressing “Confirm”, the user will be alerted of a new channel creation, and the chat list will be updated with the new channel.
5 Auto text to URL conversion

When a link (with a \textit{.domain} extension) is sent as a message, the link text is automatically converted to an active URL, that will redirect the user appropriately.

6 Delete Chat

Upon long press of a chat, the user is presented with three options. On pressing “Delete Chat”, the channel is deleted on the user’s end, and will no longer be able to view chat history.
On the long press of a chat, the user is presented with three options. On pressing the “Set Nickname” option, the user is prompted to enter a nickname. On confirming, the chat is updated with the nickname.
