1. List the questions that you asked and were asked by the clients.

By Us:
1. Give us the detailed explanation of the project?
2. What exactly you want us to do?
3. Under what time frame are you expecting to get the project done?
4. When do you want us to deploy the project?
5. Is there a similar model in real world?
6. Have you done any research on the effectiveness of this concept?
7. Are we going to handle real-time money transactions?
8. What is the goal of the project?

By Client:
1. Do we need login information?
2. Is this project limited to lose4good or will it extend to quit4good (Quitting smoking)?
3. Can we use Pay-Pal as a system for collecting money?
4. Are we going to choose an extra authentication system?
5. How will I collaborate with you guys during the course of the project?

2. Describe the infrastructure currently utilized at the client’s organization (i.e. hardware, software, network, etc.)

The project is completely a new innovation of the client. Moreover it is the start-up and we need to set the infrastructure which will be done as the timeline progresses. Hence, there is no such infrastructure being utilized.

3. List all (or as many as you were able to observe) the artifacts used by the system or by the users in operating the system. Provide a brief description about each artifact. For artifacts that have not been shown or given to you but have requested for, specify the planned delivery date for them.

<table>
<thead>
<tr>
<th>Artifact</th>
<th>Description</th>
<th>Requested/ Shown/ Receive</th>
<th>Planned Delivery Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>COTS</td>
<td>COTS include API for login through Facebook, Services like pay-pal and Database servers.</td>
<td>Few available on the web and others like Pay-pal is requested</td>
<td>10/01/13</td>
</tr>
<tr>
<td>Domain name</td>
<td>A domain name is to be registered with the hosting service like goDaddy.</td>
<td>Received</td>
<td>NA</td>
</tr>
<tr>
<td>System document</td>
<td>A document that specify how system is supposed to work on a very high level.</td>
<td>Received</td>
<td>NA</td>
</tr>
</tbody>
</table>
4. Business workflow of the proposed system is given below:

5. As clients may sometimes leave out critical information when proposing a project, suggest any changes that need to be made to the project description to correctly reflect the project that you are actually implementing (e.g. include technical details).

- The charity sponsors, who are supposed to be the motivators for the person losing weight, are limited to just the scope of friends and family. Instead we decided to pull organization like fitness
centers, companies which sell diet food as sponsors. This will help both the parties in contention given the structure of the system.

- The client portrayed a basic web page like structure that he wants us to work on. Rather, we will implement the web interface which will be more appealing than what is currently suggested when we actually implement the system.
