Table of Figures

No table of figures entries found.
1. Transition Strategy

Here the description of the transition objectives and process strategy to support the transition of the developed system. This provides the success of the final deliverables in the transition process and maintenance of the product in the future.

1.1 Transition Objectives

**Extent of capability transitioned:** System will be delivered with full capabilities that are stated in WinBook. Besides, artifacts related to the system will also be delivered.

**Degree of validation of operational satisfaction of stakeholder objectives:** Through client meetings, emails and skype calls, client has indicated satisfaction with the capabilities that were delivered in the system.

**Nature of product transition:** The system is an improvement in existing operation to enhancing the operations in Intake form, Feedback form, Online Check-in System, generating reports, developing complete Website, as well as integration of social networks.

**Number and nature of transition site:** Only one transition site and it’s homogenous with the original system.

**Degree of post-transition developer support:** There will not be any developer support after the transition phase. Instructions and manuals of the system will be provided to the client for future maintenance. Besides, maintainers will be trained during transition phase.

**Relation to support objectives:** We will collect feedback from users and clients during beta testing to support evolution planning.
1.2 Transition Process Strategy

The transition process is expected to take around maximum of 5 days after the development is done.

The strategy has the following steps:

- Development of the System.
- Testing of look and feel of the system with the help of the client and web designer.
- Testing the functionalities and the system on different machines and browsers.
- Provide training to the client using the training document.
- Get the feedback.
- Create user manual and provide the same.
2. Preparing for Transition

The preparation for transition will be detailed in terms of:

1. Hardware preparation
2. Software preparation
3. Site preparation

2.1 Hardware Preparation

The hardware preparation for transition is:

Since Women At Work are using GoDaddy service as a platform. This will not require any additional hardware preparation.

2.2 Software Preparation

Summarizing the software preparation for transition.

The following software infrastructure is required to support our system

- PHP Environment
- MySQL Data Base
- JavaScript
- WordPress

The new modules in the system like Feedback form and Blogging should be deployed. Update the original system to support these modules. The codes for the modules like registration form and Online check-in and Report generation of the new system should be merged with the code of original system. This requires the modification of some interfaces and configurations. The database of the original system should be modified in order to be compatible with the new system modules.
2.3 Site Preparation

This Section provides the plan for site preparation

- Computer with Internet access.
3. Stakeholder Roles, Responsibilities and Schedule
