• Q & As
Overview of the Project

OBJECTIVE

• Help Women reach their full employment and earning potential through services like Career Counselling, Computer Training, Workshops, etc.

WHAT WE WILL DO

• Improving data management by centralizing data from different sources to Neon CRM.
• Improve usability for clients by redesigning the website and providing web based registration and feedback.
• Easier and improved report generation.
Risk Identification

1. There are no mockups provided for UI design
   • Significant risk if the clients do not like the UI design in the final system.

2. Support of Neon CRM API for automation of registration and feedback
   • Since the API is available in the beta version, there is an uncertainty over the feasibility of automation.
Prototypes Built

1. Web based Feedback, Registration form for clients
   • Prototyping the UI design until the clients give a positive feedback
   • Reduces the risk of clients not being satisfied with the final system

2. Sample registration module to demonstrate working of the Neon CRM REST API
   • Prototyping the sample registration module ensures that the Neon CRM API supports addition and retrieval of data.
