For this assignment, the teaching staffs will be reviewing the developed source code of your system. The criteria are as follows:

- **Design to Code faithfulness**
  - You followed the architecture designed (Technology-Specific Design Model)
  - Classes are defined/implemented as classified in design
  - Implementation follows the sequence diagrams

- **Architectural framework faithfulness**
  - Utilizes the architecture framework/patterns claimed in the SSAD

- **Functionalities of developed capabilities**
  - Capabilities are functional

Only a representative from the team needs to be present at the code review. However, having the main developer/programmer or system/software architect as the representative or present is highly recommended as they tend to be able to better answer the technical questions.
